

Paver Designs By Water-Jet

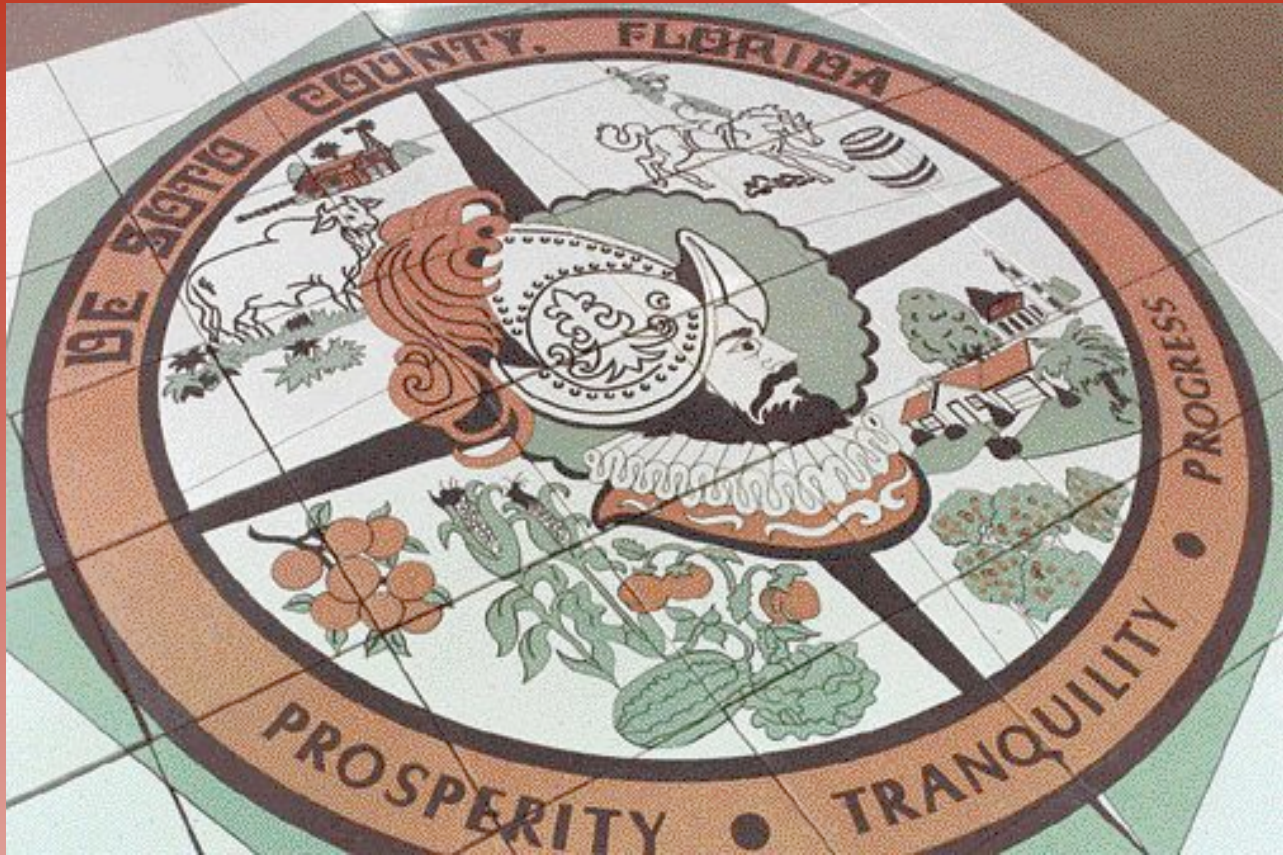

... On The Cutting Edge

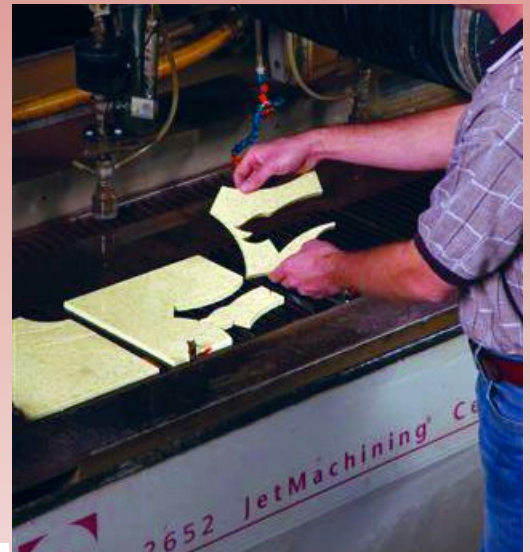

Distinguish your project from all others. Simple, yet amazingly effective; water-jet technology is the quickest, most efficient method of cutting pavers to achieve the ultimate in design accuracy and eye appeal. Arcs, circles and other intricate designs can be cut using the precise water-jet cutting techniques illustrated in these photos.

Paver Designs By Water-Jet

All cutting is controlled through a CAD/CAM system that directs each tile cut; registering precisely with those adjacent. Whether a radius or straight cut or an intricate in-lay pattern, pavers are delivered to the job site cut and cataloged; ready for installation.

The water is filtered, compressed and emitted at ultrasonic speed. The result is a jet stream that cuts cleanly, with no rough edges, giving perfect registration between pavers.
